

## Advantages of solar-powered street lights

Here are some of the major advantages of solar power street lights.

### 1. Install them anywhere

They are perfectly suitable for any exterior light requirement.

- Street and roadways
- Pathways
- Parking lots
- Perimeter security
- Parks
- Signals

### 2. Saving money

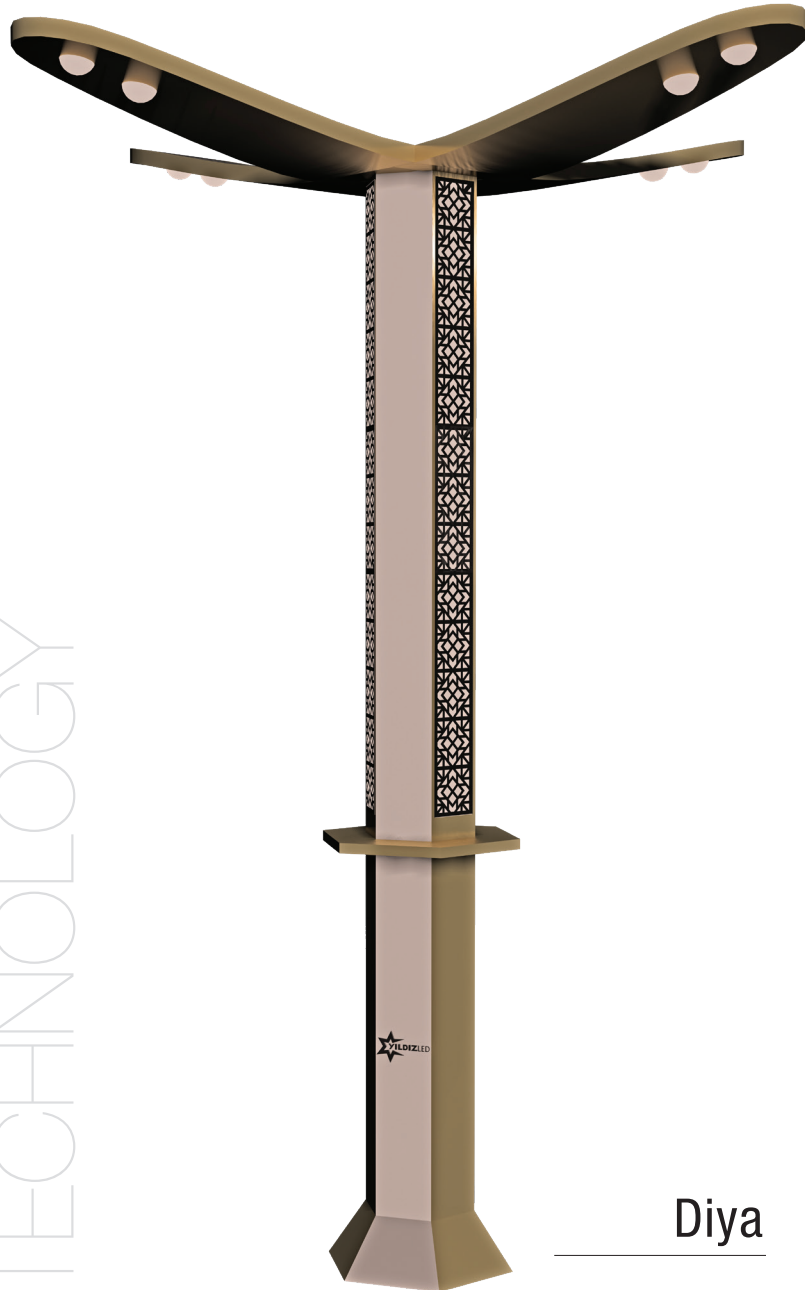

Solar-powered street lights have almost no operating cost associated. Just put the lights up and leave the rest to the sun.

Since they work with LEDs, bulbs do not need to be changed as frequently as with conventional lighting.

### 3. Minimized risk of accidents

Solar-powered street lights do not have external wires, given that they are not connected to the grid. The personnel who fix street lights will be safer while working with these.
